It makes me angry for people who buy these products in the grocery stores, where everything is bright and clean. The barns are not bright. They’re not clean. It’s not at all what it seems.

—An HSUS undercover investigator who spent a month at a Cal-Maine Foods facility in Texas, where four “housekeepers” were expected to care for 240,000 animals each

**Locations:** Waverly, Virginia  
**Exposed:** Industrial pig breeding facility owned by the world’s largest pork producer

At a massive pig breeding farm owned by a Smithfield Foods subsidiary, an HSUS undercover investigator documented the miserable lives of breeding sows virtually immobilized in gestation crates. Open pressure sores and untreated abscesses were common. Some animals showed compulsive swaying and head-bobbing; others chewed the cage bars until their mouths bled. Outside the crates, the animals were treated roughly—struck with iron rods or even thrown into a dumpster to die.

The widely publicized video footage hit a public nerve, adding pressure on Smithfield and other pork producers to end the use of gestation crates. “If you’re not already anti-factory-farming, this will do it,” wrote New York Times Magazine columnist Mark Bittman in his blog. “… the video leaves me pretty much speechless.”

**Locations:** Willmar, Minnesota  
**Exposed:** Largest turkey hatchery in the U.S.

Days before Thanksgiving, an HSUS investigation revealed the unapetizing reality behind industrially produced turkey products. Working at the Willmar Poultry Company, an investigator videotaped conveyor belts drenched in the blood of young turkeys whose toes, snoods, and beaks were cut off with no anesthetic. Sick and injured hatchlings fell from conveyor belts and flapped helplessly for hours on the factory floor—until the end of the day, when they and any surplus birds were tossed into a machine that ground them up alive.

It was The HSUS’s first undercover expose of the U.S. commercial turkey industry, which produces more than 250 million birds each year. Willmar and one of its customers defended the abuses as standard industry practices. Sadly, they’re correct: Federal animal welfare laws don’t apply to animals on the farm, enabling businesses to treat birds as mere production units.

The HSUS is petitioning the FDA about the Cal-Maine findings, asking the agency to amend the federal egg safety rule. Says The HSUS’s Dr. Michael Greger: “This is the science that the FDA cannot afford to ignore.”
